Adam Swank is the chemist performing all the runs. Mark is collaborating on the project too. While we do not have tissue data back yet,

Adam, Mark, anything else you want to add?

T.

So it's even more complicated than I thought!

As we amass more data, I would certainly love to know what you think about it. I'll keep you posted.

Thanks, Tamara. I will ask the CTS group not to share since results are still preliminary. **Ex. 5 Deliberative Process (DP)**

Hi John,

Thanks for the positive feedback.

Hi Tamara,

I enjoyed your CSS lightning talk today. Do you have a list of the ether containing PFAS compounds that you found to be unstable in DMSO? I think the CSS team developing the Chemical Transformation Simulator would be very interested—they are in the process of developing a PFAS reaction library. I am sure they would be glad to share their insight in the stability/reactivity of other PFAS compounds that you might work with in the future. Thanks.

John
